## Product Description

Our MPO to MPO Trunk CPR Cca cables have a female MPO connector at each end of the cable and they are ideal for creating structured cabling system, including backbone and horizontal interconnections.

In a data centre environment with ever-increasing bandwidth and network connections, conventional duplex fibre leads are unable to meet these increased demands. This is where MPO cables are the perfect solution. A single MPO connector can house up to 24 fibres in a form-factor that is very similar in size to a duplex LC connector.

Using MPO trunk and breakout cables allows much higher density cabling. With them also being CPR Cca rated they are approved for installations into any public sector building, and are compliant with the most stringent fire
