

FEATURES

- US Conec MTP® (F) to MTP® (F) Trunk Cable
- CPR Cca-s1a,d0,a1 Rated Cable
- Available in OM3 (Aqua) & OM4 (Aqua & Erika Violet)
- Approved for installation into any public sector building, compliant with the most stringent fire regulations
- BASE-12 Method B

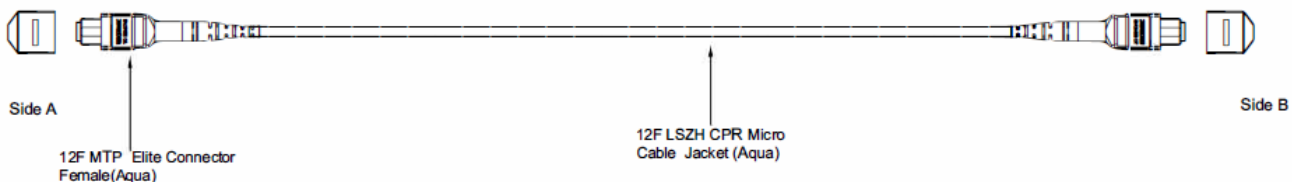

DESCRIPTION

Our US Conec Elite MTP® to MTP® Trunk CPR Cca cables have female MTP® connectors at each end of the cables and are ideal for creating structured cabling systems, including backbone and horizontal interconnections.

In a Data Centre environment with ever-increasing bandwidth and network connections, conventional duplex fibre leads are unable to meet these increased demands. This is where MTP® cables are the perfect solution. A single MTP® connector can house up to 24 fibres in a form-factor that is very similar in size to a LC duplex connector. Using MTP® trunk and breakout cables allows much higher density cabling. With them also being CPR Cca rated they are approved for installation into any public sector building, and are compliant with the most stringent fire regulations
