## Product Description

Our US Conec Elite MTP® to MTP® BASE-16 CPR Cca Trunk cables have a female MTP® connector at each end of the cable and they are ideal for creating structured cabling systems, including backbone and horizontal interconnections.

In a data centre environment with ever-increasing bandwidth and network connections, conventional duplex fibre leads are unable to meet these increased demands.

This is where MTP® cables are the perfect solution. A single MTP® connector can house up to 24 fibres in a form-factor that is very similar in size to a duplex LC connector.
